In 300 words or less, please identify the ways you think this experience will impact your STEM ambitions.

This experience will impact my STEM ambitions by providing a strong foundation for future learning. My ambitions in STEM include exploring how different fields intersect and complement each other. I hope to explore how the overlaps of specific topics can create more innovative solutions. A key aspect of this experience is the ability to participate in independent, self-guided learning. As I pursue the field of STEM, I know individual research is an important aspect to foster my curiosity and become a better student. This opportunity gives me an early start with the research process, improving my ability to ask the right questions and draw meaningful conclusions. These skills will be useful in future projects I take on in my college life and career. While I have been focused on Computer Science throughout high school, I would love to get a chance to branch out into other fields of STEM. Exposing myself to applications between different fields will definitely enhance my interdisciplinary skills. With these skills, I can approach problems with multiple perspectives and create comprehensive, well-rounded solutions. Additionally, teamwork is fundamental in STEM and collaborating with peers and mentors will teach me how to effectively communicate and think together in a group setting. Most importantly, diving deeper in these topics will further ignite my passion for STEM. This opportunity will drive me to push my boundaries and excel in my efforts. It will motivate me to step out of my comfort zone, refine my skills, and ultimately prepare me for a future where I can contribute meaningfully to the field.
