In 300 words or less, please explain why you want to study in the field chosen above.

I want to study in bioscience and bioengineering to connect my two passions and learn the possibilities of how they can interact with one another. I have always been interested in solving problems in an efficient way and the applications of technology and biology will help me pursue this in the real world. Biology fascinates me because it reveals the intricate systems that govern life, from the smallest cells to the most complex organisms. It helps me conceptualize the many functions that occur within us and how we all come together to sustain life. This fuels my curiosity and inspires me to explore ways in which technology can mimic biological processes for more efficient systems. Additionally, learning biotechnology will help me gain a better grasp of my career and goals. I would treat this opportunity to assess my compatibility with the field, gain hand-on experience, and determine my contributions to advancements. This field excites me because of its innovations and so I would love to learn more. Along with the technical aspects of this field, I am aware of the ethical and societal discussions. For example, the idea of CRISPR gene editing can be alarming for many people, and so the ethical issues should be addressed. I want to be a part of these conversations and give my own opinions to help make advancements. By immersing myself in bioscience and bioengineering, I will develop skills and grow my knowledge necessary to make contributions in the field. With this opportunity, I will be able to explore my interests and prepare for a future where I can apply my skills to make efficient solutions.
